2- Safety Rules. I've rarely started a fire with a clean station and a fire extinguisher handy. Don't stand in a puddle of water. Work in a well-ventilated place. The leather thing is not a Village People thing-protection goes a long way towards strong welds; it is tough to concentrate on the puddle when you are on fire. You don't need the full kit-but don't wear polyester which will melt and weld with your The saftey skin. Yeah I know; eye protection is for sissies & one-eyed mechanics, I wear glasses under the welding helmet or face shield. The saftey of Welding

welding- which has it's advantages.nd you can make stuff pretty damned soon. Follow
